During the past three weeks, Butler County’s COVID-19 cases increased, along with several other healthcare indicators. Between June 24 and June 30, Butler County had 181 cases, the largest number of COVID-19 cases in any week since the beginning of the pandemic. From June 16 until July 3, the average new cases per day doubled from 15 to 29. Due to clinical and reporting lags, these numbers may continue to grow for this reporting period. The community continues to experience early signs that more people are seeking medical care for COVID-19 symptoms. From June 16 to July 4, visits for COVID-19 to the emergency department tripled from an average of 2 per day to 7. More people are also visiting their doctors and being diagnosed with COVID-19. Between June 16 and July 7, the average outpatient visits more than doubled from 15 to 38 visits per day. Butler County also hit a new threshold for the overall utilization rate for regional intensive care unit beds, which exceeded 80% during 5 of the last 7 days.
