

Protecting yourself against COVID-19

Vaccination schedules

Vaccine authorized for recipients 12 years or older Pfizer/Comirnaty adult/adolescent formulation

Vaccines authorized for recipients 18 years or older Moderna

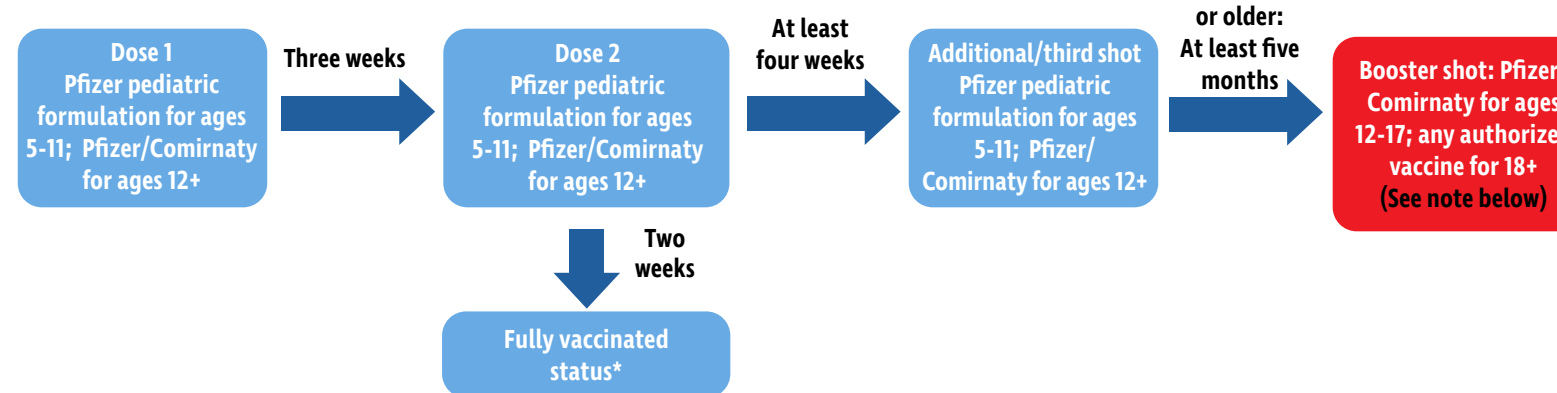

Johnson & Johnson (See note below)

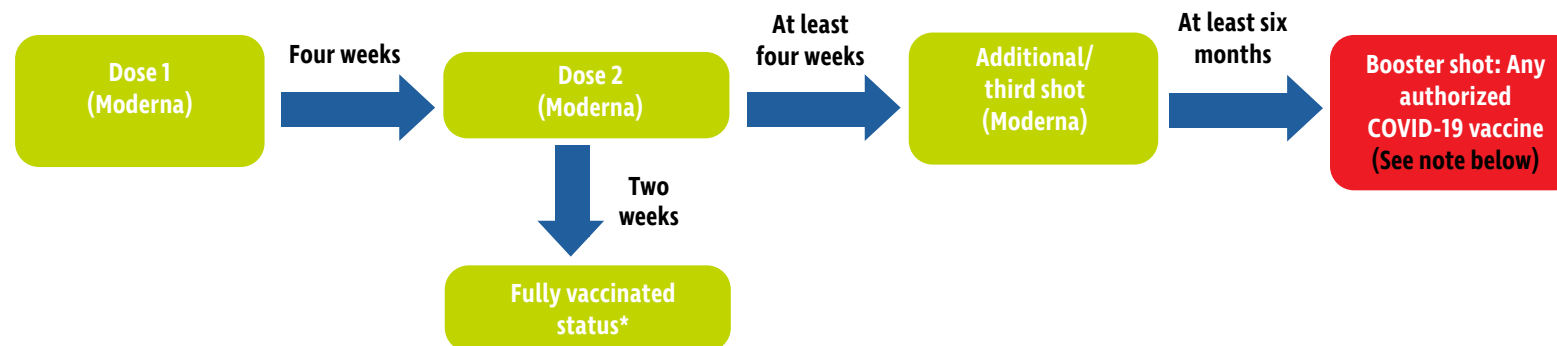

Vaccine authorized for recipients ages 5-11 years Pfizer pediatric formulation

Vaccine authorized for recipients 5 years or older with weakened immune systems Pfizer/Comirnaty adult/adolescent formulation

Vaccine authorized for recipients 18 years or older with weakened immune systems Moderna

Note: The Centers for Disease Control and Prevention (CDC) endorses the COVID-19 mRNA vaccines developed by Pfizer and Moderna over the Johnson & Johnson vaccine. The recommendation followed a thorough review of the latest evidence on vaccine effectiveness and safety. Most patients should now consider an mRNA primary vaccine series or booster dose.

*A person who is "fully vaccinated" against COVID-19 has full protection against the disease. Recipients are considered fully vaccinated two weeks after receiving the single-dose Johnson & Johnson vaccine or two weeks after receiving the second dose of a two-dose vaccine (Moderna or Pfizer/Pfizer pediatric/Comirnaty). Because protection wanes over time or can be affected by certain immune system deficiencies, certain people are advised to receive a third and/or booster dose.

**Booster doses are not currently authorized for anyone under the age of 12.
