Do you fall into one the following categories?

- Currently receiving treatment for a solid-tumor cancer or a blood, bone marrow, or lymph cancer.
- Recipient of a solid organ transplant and using related immunosuppressive drugs.
- Recipient within the past two years of a CAR-T-cell transplant or taking related immunosuppressive drugs.
- Recipient within the past two years of a hematopoietic stem cell (bone marrow) transplant or taking related immunosuppressive drugs.
- Living with a moderate or severe primary immunodeficiency.
- Living with advanced or untreated HIV.
- Under active treatment with any of the following.
  - High-dose corticosteroids.
  - Alkylating agents.
  - Antimetabolites.
  - Transplant-related immunosuppressive drugs.
  - Chemotherapy treatments classified as severely immunosuppressive.
  - Tumor necrosis factor (TNF) blockers.
  - Another biologic agent that is immunosuppressive or immunomodulatory.

**Do I NEED AN ADDITIONAL COVID-19 VACCINE SHOT?**

The Centers for Disease Control and Prevention (CDC) recommends additional doses of mRNA vaccines for people whose immune systems are weakened due to certain medical conditions or therapies. It is estimated that less than 3% of the population is eligible for these doses.

The chart below can help you determine whether you should talk to your doctor about receiving an extra dose. If in doubt, always ask your doctor for guidance.

---

*Due to insufficient data, the recommendation for an additional dose does not apply to recipients of the single-dose viral vector Johnson & Johnson COVID-19 vaccine. The CDC and U.S. Food and Drug Administration are actively working to provide guidance on this issue."
