

## COVID-19 VACCINATION SCHEDULE FOR PEOPLE WHO ARE IMMUNOCOMPROMISED

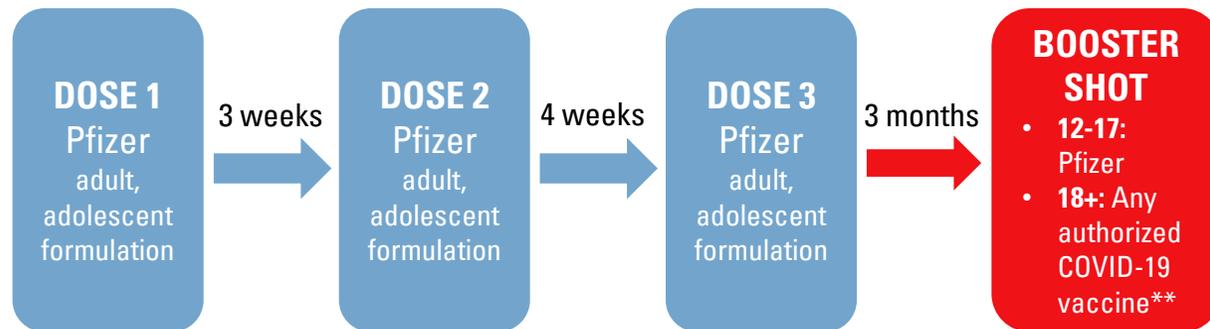

### Pfizer-BioNTech (Comirnaty) 5-11 years (pediatric formulation)

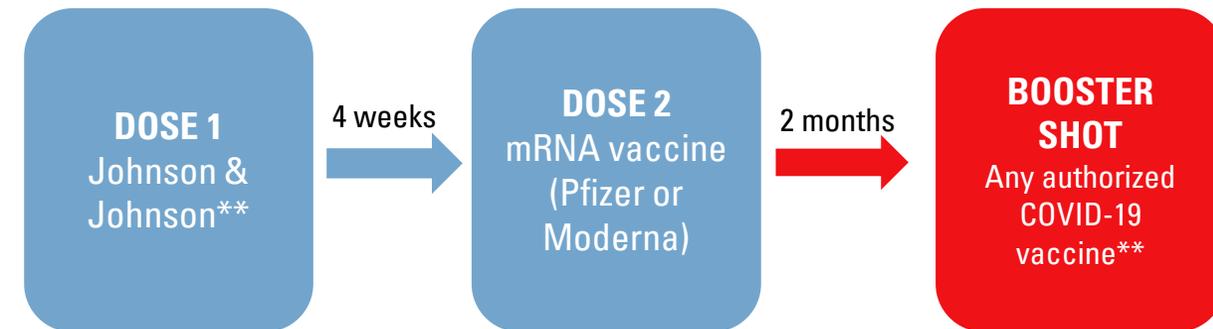

### Moderna (Spikevax) 18 and older

### 12 and older (adult/adolescent formulation)

### Johnson & Johnson (Janssen) 18 and older

*\*Recommended dosing intervals vary based upon age and other risk factors. An 8-week interval may be optimal for people ages 12-64 years, and especially for males ages 12-39 years. A shorter interval (3 weeks for Pfizer-BioNTech; 4 weeks for Moderna) between the first and second dose remains the recommended interval for adults ages 65 years and older; and others who need early protection due to increased concern about community transmission or risk of severe disease.*

*\*\*mRNA vaccines (Pfizer or Moderna) are recommended over the Johnson & Johnson vaccine in most cases based on the latest data on vaccine safety and effectiveness.*
