

## Childhood Lead Poisoning

### Notes:

1. The table below contains data for children less than 72 months (6 years) of age at the time of the test.
2. Blood lead levels reflect the highest confirmed test during the year if a confirmed test exists for the child, or the highest test for the year, otherwise.
3. Elevated Blood Lead Levels (EBLLs) are shown in red.
4. Chart contains preliminary data and may be updated quarterly.
5.  $\mu\text{g/dL}$  = a measurement tool; micrograms per deciliter of blood
6. Unconfirmed EBLLs are defined as tests for children who had an elevated capillary test and did not receive an elevated confirmatory test within 90 days.

The chart below demonstrates the number of children tested and determined to have elevated blood lead levels during 2012:

County	Total Children Screened	< 5 $\mu\text{g/dL}$	5-9 $\mu\text{g/dL}$	Confirmed Elevated Blood Lead Levels (EBLLs)				Total Confirmed EBLLs	% EBLLs	Unconfirmed EBLLs
				10-14 $\mu\text{g/dL}$	15-19 $\mu\text{g/dL}$	20-24 $\mu\text{g/dL}$	$\geq 25$ $\mu\text{g/dL}$
